To whom it may concern,

I was a Senior Emergency Services Officer at St Ives Goldmine in Kambalda Western Australia.

In May 2007 I was on called out to a Truck fire at 1am to assist the Local Volunteer Fire and Rescue Crews with water supply.

The local Fire crews were having trouble extinguishing the fire with the Fire Fighting Foam that they had on board their appliances. The local fire crews were from Coolgardie and Kambalda. Both crews had used over 3000 liters of water and several hundred liters of foam.

St Ives uses the Fire Ade and we gave the local Fire fighters a 20 liter drum to assist them to extinguish the fire.

I assisted the fire fighters in the use of the Fire Ade as they had not seen it before and was unsure on how it worked.

We ended up extinguishing the fire using about 1 quarter of the drum and about 1000 liters of water. Since this incident I have recommended this product to other mine sites as I have had the pleasure of using it in a real life incident.

The Fulltime fire crew from Kalgoorlie arrived as we were using the Fire Ade and were very impressed with the product.

If you would like to discuss this letter any further please feel free on contacting myself on my phone numbers below.
